

FOR IMMEDIATE RELEASE

## **MARSHFIELD PUBLIC SAFETY DEPLOYS LATEST TECHNOLOGY, IMPROVES DISPATCH RELIABILITY**

MARSHFIELD, MASS

May 15, 2011

The town of Marshfield's fire department as well as the EOC recently received a state of the art dispatch console system to coordinate E911 emergency radio communications. Marshfield fire department was faced with the challenge of deploying a high performance dispatch console within a limited budget. Radio Solutions was able to provide Marshfield with a Telex IP based dispatch console to replace their outdated equipment that was frequently failing and is no longer supported.

The demand for public safety communications to be interoperable is more apparent in the last decade and has naturally lead to improvements in technology. Progressive advancements in public safety network engineering by companies like Radio Solutions, Inc., offered Marshfield fire department a sophisticated and cost effective solution. The new console will be located at the Marshfield fire headquarters and is similar to recent installations in Wrentham, Scituate and soon the city of Waltham six position E911 center. The EOC in Marshfield also utilizes Telex IP dispatch consoles and is ready for mission critical operations.

The decisions made by Marshfield Fire Department were confidently made through extensive market research and referencing similar radio systems featuring Telex C-soft consoles. With thousands of consoles manufactured and delivered throughout the world it was clear that Telex has deployed more IP based dispatch consoles than any other manufacturer and was among the first to have commercially available voice over IP dispatch consoles. The state of the art dispatch console is designed to serve the town of Marshfield for many years to come without concern that it will be outdated any time soon.
